

RFRain Smart Cabinet

RFID-enabled cabinet for inventory management

Utilizing patent-protected RFID technology in combination with point-of-use reporting, the RFRain Smart Cabinet gives hospitals precise, real-time inventory management at the item level to effectively automate and optimize management of high-value medical supplies.

Benefits of the RFR-SMART-CABINET™

Eliminating stock-outs and expired products

The RFRain Smart Reader scans through all the items with RFID tag inside the cabinet. The reader stores data about what items are present, how many are present and the expiry date of each product as well as temperature monitoring.

Pre-installed software

The RFRain Smart Cabinet comes pre-installed with the the Zone Manager™ software on the Smart Reader. Users can access the captured data in the Zone Manager™ for in-depth statistics and configuration options. This allows users to remotely upgrade software, run reports and change the item information.

24/7 reliability even during power outage

Designed with mobility and reliability features in mind, the reader battery activates during temporary power loss that can last up to 12 hours. This feature enables reader functionality at all times even when power is disrupted for 24/7 reliability.

Customize Alerts

Items are automatically scanned. When an item is removed from the shelf it is automatically updated in the Zone Manager. Receive text and/or email notifications when items go missing, expiry dates occur as well as temperature changes.

Access Control

Authorized staff unlock the cabinet with a mobile app. A motion-sensor camera captures images enabling detailed item traceability and accountability that includes the time an item was removed, which item was removed, and who removed it.

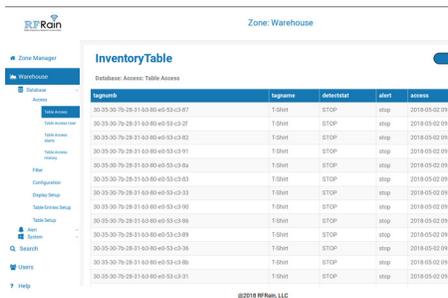

Easy installation and programming

True plug and play system. Our Smart Readers make it simple to set-up the Smart Cabinet and start reading tags. Start reading your tagged assets inside the Smart Cabinet in a matter of minutes.

Zone Manager™ software

Provide in-depth insights and allow staff to quickly replenish stock

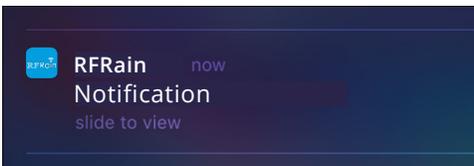

Our easy-to-use software helps users track item usage and the ability to restock quickly and easily.

Remotely track item usage

Quickly and conveniently read the data gathered from your RFR-SMART-CABINET from a web browser. Easily keep track of total daily item usage and help staff understand the product usage from the smart cabinet each day without having direct access.

Notify users with alerts that require attention

The Zone Manager™ software notifies staff with an email or text notification with all the necessary information to track inventory and minimize stock-out.

Business insights with Zone Manager Enterprise™

The Zone Manager advanced cloud-based software aggregates the data from all the Smart Cabinets from multiple locations into one centralized management platform. This provides the entire supply chain an accurate view of inventory levels, usage, and status of high-value medical supplies.
